

Filtering self-rescuer SR-4

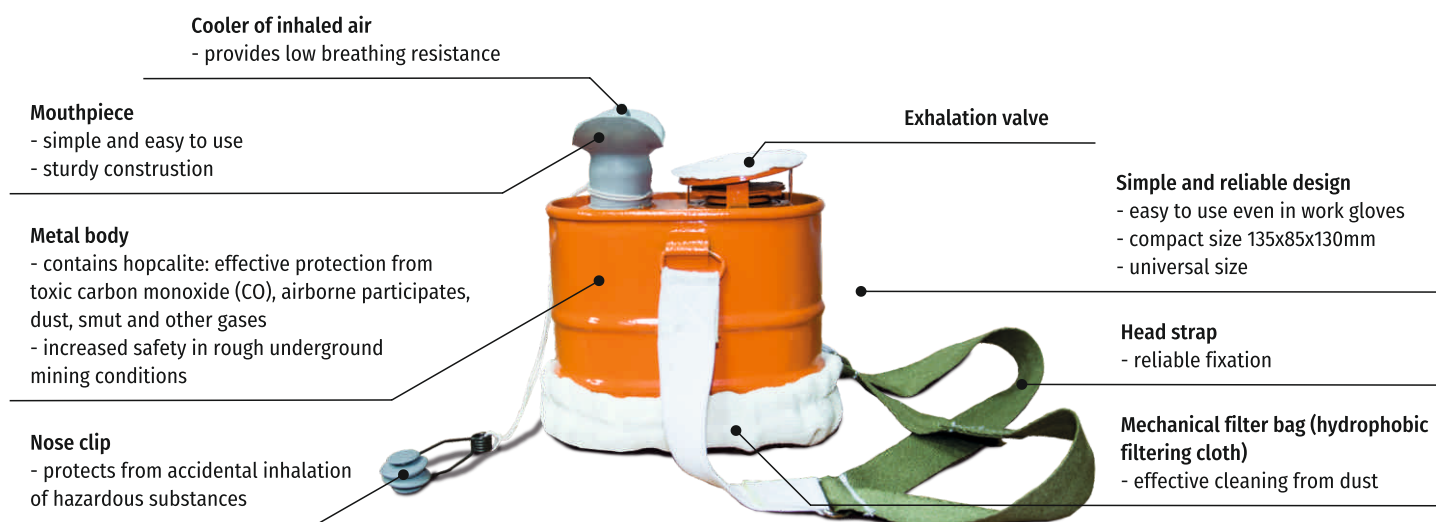

It is an air-purifying respirator for single use providing protection against toxic carbon monoxide (CO), airborne particulates, dust, smut and other gases emitted in underground mine fires or explosions.

The filtering self-rescuer is immediately ready-for-use after opening and removal from the container. It has a hypoallergenic mouthpiece and a nose clip to reliably protect the user from the contaminated ambient air. The mouthpiece can't be destroyed during operation.

The adjustable head harness provides tight fit and hands-free usage.

The sturdy chemically-stable container from thickened metal is hermetically sealed, providing long-lasting protection for the respirator.

The filtering self-rescuer SR-4 was designed specially for miners and for emergency evacuation from dangerous zones.

Technical characteristics

Weight, g	1000
Dimensions (incl. container), mm	135x85x130
Breakthrough time, min	Approx. 120 (one-time use)
Warranty storage period, years	3
Temperature range, °C	+2...+50
Oxygen concentration in the ambient air, %	more than 17
